

CMC - CONTAINER MOVEMENT CONTROL

The worldwide control of container stock, no matter how many boxes you have, is tedious work. Gathering and evaluating container information like number, size, type, location, standing times, etc. is not difficult but very exhausting. Why not take advantage of a system which was specially designed to fulfil such tasks?

Monitoring of equipment is one thing the computer does faster and more accurate than humans.

A powerful tool

CMC readily answers questions arising in day-to-day business: how many containers are in which depot; are they empty or full, intact or damaged, available or booked? The application aids the agent control his containers within his area of responsibility.

and sent on to the shipping company principals via EDI, email or fax. Because: A tight control saves money by avoiding long standings of your boxes.

Another feature is the worldwide view of all monitored containers; no matter whether 50 or 500 000 boxes are to be controlled, the application handles the boxes both, carrier's own and leased, reliably and accurately.

The movements reported by the agents go straight and automatically into CMC, where they are ready for any query. The quality of reported movements is easily checked by a look at their history; illogical sequences are highlighted on the screen.

Easy handling and comprehensive reports guarantee a smooth and complete equipment control.

Container Sum - Location			Container Sum - Gr			
Country	City	Avail	Rsvrd	M/A	Sts	
HK	40DC	68	8	76		
HK	20DC	60	7	67		
HK	40HC	48		48		
HK	40HR	18		18		
TH	20DC	-10	23	13		
JP	40DC	8	4	12		
TH	40HC	9		9		
JP	20DC	3	6	9		
JP	40HC	8		8		
TH	40DC	-3	6	3

Full speed ahead with leased boxes

An important feature of CMC is the lease control module. Contract monitoring, analyses of leasing invoices, forecasting, depot handling costs, depot storage costs, pick-up and drop-off reports keep your leasing expenses in tight control.

Box 'in the docks' – fast in, fast out

The maintenance and repair module speeds up the containers' way to and from repair. With the help of your specific repair tariffs estimates and approvals are compared in no time at all. Thanks to EDI the

exchange of estimates and approvals between agent and principal is as quick as lightning. Which container is damaged how badly and where exactly? What are the repair costs? When will the container be ready? You get encompassing information with respect to each single M + R depot, the faster to decide where your boxes can be repaired at the lowest expense.

Profitable by land and by sea

Container flow and numerous statistics allow for economic and administrative evaluations of the boxes' movements. Reports that are not already included in CMC you can easily generate from the information stored in the database.

Demurrage/Detention

A financially very interesting feature is the electronic demurrage/detention invoicing. The computer calculates the fees for demurrage/detention with respect to the customer to be invoiced, holidays and weekends. For this purpose CMC presents a draft invoice which can be sent out when cleared by staff. Let CMC raise your income and charge detention.

Features

- ◆ Equipment control
- ◆ Demurrage/detention invoicing
- ◆ Lease control
- ◆ Maintenance and repair
- ◆ Container flow
- ◆ Numerous statistics
